                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2495 AIGAACICCCAIIGGAIGAACAIIGIGAACGACIGCCIIAIGAIGCCAGCAAAIGGGAAI 2554
                                                                              (NP-1) receptor protein. One method comprises introducing a sample comprising the compound to the receptor protein and allowing the compound to bind to the complex. Signaling through VEGFR-2 is enhanced in the presence of the NP-1 co-receptor. The methods of the invention can be used for identifying novel pro- and anti-anglogenic compounds. The present sequence represents the DNA encoding a human VEGFR-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               398 AIGCIAAIGGIGICCCCGAGCCICAGAICACTIGGIIIAAAAACAACCACAAAAIACAAC 457

This sequence represents a novel type III receptor tyrosine kinase gene. A labelled EcoRI-BamHI DNA segment derived from clone BTII1081.8 was used as a probe to rescreen a human endothellal cDNA library in the continuous probe of the gene from which the insert portion of BTII1081.8 is derived. A synthetic probe designed from undigorides 3297-3325 of BTII1081.8 is then used to isobate more a Tull length clones. One of the clones, designated BTIII200.2 is cloned into pBluescript KS and the synthetic oligonucleotide IGANGGGGG AIG GAG cloned, which contains the initial sequence Metally in the first two anno acids encoded by the KDR gene, forming BTIV140, which is then purified on a CSCI density gradient. This was sequenced, together with BIII1081.8, and BTIII129.5 to comprise the entire ORE of 4,068 nucleotides of the KDR gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PARAGGAAACCIGGAGAAICAGAGGACAAGIAIIGGGGAAAGCAICGAAGICICAIGCA 2065

This receptor is capable of binding to the vascular endothelial cell growth factor, VEGF and is used in a screening assay which identifies compounds that inhibit VEGF action on KDR. Such compounds which inhibit binding of VEGF to the KDR may inhibit angiogenesis and thus be useful for treating cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CACTCTTAATCTTACCATCATGAATGTTTCCCTGCAAGATTCAGGCACCTATGCCTGCAG 250
                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes murine foetal liver kinase 1 (flk-1), a protein tyrosine kinase. Isolated antibodies, pref. moncolonal, raised against the extracellular portion of flk-1 can be used to assay for flk receptors on the surface of haematopoietic etem cells, and to isolate positive cells. The antibodies can also be used as, or to obtain ligands, which stimulate the proliferation and/or differentiation of stem cells. The ligands can be used, e.g. for treating anaemia, or bone marrow damage resulting from cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel method of isolating cells expressing fetal liver kinase 1 (flk.1) receptors on their surface and comprises binding the cells to a polyclonal or monoclonal antibody specific to antibody. The method can be used to isolate that have bound to the antibody. The method can be used to isolate hematopoietic stem cells in any mammal but preferably a rat, mouse, rabbit or human. The proteins of the invention belong to the receptor protein family. This sequence encodes the murine flk-1 protein which is used in the method of the

                                                                                                                                                                                                                                                                                      Nucleic acid sequences coding for murine flk-2 and specified subfragments of it are claimed. The murine flk-1 coding sequence (i.e. AAQSSA) is also disclosed. The flk polypeptides are receptor protein tyrosine kinases which are expressed only in primitive haematopoletic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 708.4; DB 14; Length 5406;

This sequence encodes a human receptor protein tyrosine kinase which belengs to a new functional class of protein tyrosine kinases (prks). Elevers, this prix is not in the same class as flx-2. prks in the same class as flx-2 are expressed in primitive mammalian hematopoietic elass as flx-2 are expressed in primitive mammalian hematopoietic fis expressed in mature hematopoietic cells flwf). This gene is expressed in more mature hematopoietic cells. The protein encoded by this sequence is an example of a receptor prk and is called fetal liver spheen. Liver kinnes I (flx-1). flx-1 is expressed in fetal liver spheen. thymus, brain, stomach, kidney, lung, heart and intestine, and adult brain, kidney, heart, spleen, lung, muscle, marrow and lymph nodes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2070 CAICTIGATIGIGGCATTICAGAATGCCTCTGTGCAGGACCAAGGCGACTATGTTTGCTC 2129

                                                                                                                                                                                                                                                                                                                                                                                        liver kinase) receptor protein-tyrosine-kinase. Flk1 is expressed in both primitive and mature hematopoietic cells, and in other tissues. The gene product is useful in isolation of receptor ligands, which have applications in diagnosis of bone marrow disorders and in stimulating proliferation and/or differentiation of primitive hematopoietic stem cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               321 TCAGGAAGCACCAIACCICCIGCGAAACCICAGIGAICACACAGIGGCCAICAGCAGIIC

Standard POR techniques from stem-cell receptor-contg, tissue cDNA libraries. Suitable tissues include foetal liver, spleen or thymus cells or adult marrow or brain cells. The POR primers used are based on known sections of the flx-1 gene. The murine flk-1 clone may be known sections of the flx-1 gene. The murine flk-1 clone may be known sections of the flx-1 gene may be known sections of the flx-1 gene may be known sections of the fly manual be proposed in primative but not mature hammatapoietic cells. Ligand binding to the fx may be prepel, which hammatapoietic cells in vivo. The ligands can stimulate the proliferation and/or differentiation of primative proliferation of additional primitive stem cells, differentiation into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fetal liver kinase 1 (flk.1) receptors on their surface and comprises binding the cells to a polyclonal or monoclonal antibody specific to the FLK-1 receptor and isolating the cells that have bound to the antibody. The method can be used to isolate hematopoletic stem cells in any mammal but preferably a rat, mouse, rabbit or human. The proteins of the invention belong to the receptor protein family. This sequence encodes the murine flk-1 protein which is used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3395 CCCGACTCCCTTTGAAGTGGATGGCCCGGAAACCATTTTGACAGAGTATACACAATC 3454

```
This sequence encodes a human receptor protein tyrosine kinase which belongs to a new functional class of protein tyrosine kinases (pTKs). However, this pTK is not in the same class as fik-2. pTKs in the same class as fik-2. pTKs in the same class as fik-2 are expressed in primitive mammalian hematopoietic (pHC) cells but not in mature hematopoietic cells (mHC). This gene is expressed in more mature hematopoietic cells. The protein encoded by this sequence is an example of a receptor pTK and is called fetal liver kinase i (fik-1). fik-1 is expressed in fetal liver.spleen, thymus, brain, stomach, kidney, lung, heart and incestine, and adult brain, kidney, heart, spleen, lung, muscle, marrow and lymph nodes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3355 CCCGACTCCCTTTGAAGTGGATGGCCCCGGAAACCATTTTGACAGAGTATACACAATTC 3454

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid sequences coding for murine flk-2 and specified subfragments of it are claimed. The murine flk-1 coding sequence (i.e. AQS1504) is also disclosed. The flk polypeptides are receptor protein tyrosine kinases which are expressed only in primitive haematopoletic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3455 AGAGCGATGTGGGCTCTTCGGTGTTGCTCTGGGAAATATTTTCCTTAGGT 3507

This sequence encodes the murine receptor protein tyrosine kinase (PTK), flk-1. This pTK is not in the same family as flk-2 (see also AA404091-15) as it is expressed in primitive hematopoietic cells and also in mature hematopoietic cells. flk-1 is expressed in fetal liver, spleen, thymus, brain, stomach, kidney, lung, heart and intestine and adult brain, bone marrow, kidney, heart, spleen, lung, muscle and lymph nodes.
                                                                                                                                                                                                                                                                                   Totipotent haematopoietic stem cell receptors, their ligands and DNA sequences - for treating anaemia(s) and bose marrow damage due to e.g. cancer chemotherapy or radiotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5406 BP; 1412 A; 1298 C; 1423 G; 1273 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  misc_feature
                                                                                                                                                                                                                                                    regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subochone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL, Sw. SWISSPROT; Tr., TREMBL, WP., WORMPEPP; Information on the WORMPEPP there is the control of the WORMPEPP.
                                                                                                                                      together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with a small overlap as described above.
                                        requests: clonerequest8sanger.ac.uk
On Aug 9, 2001 this sequence version replaced gi:14715292.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 http://www.sanger.ac.uk/HGP/Chr13
RP11-502P18 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                              This sequence was finished as follows unless otherwise noted: all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group. Further information can be found at
